AB - J04175366 Compsn. consists of (A) 100 pts.wt. of PBT, (B) 0.1-10
pts.wt. of bisphenol A polycarbonate or its oligomer and (C) 0.1-5
pts.wt. of at least one cpd. selected from epoxy cpds. having at least
two epoxy gps. in a mol. and polycarbodiimides having at least two
carbodiimide gps. in a mol. Alternatively it may consist of (A), (B),
(C) and (D) 0.3-10 pts.wt. of polyester elastomer. An injection
moulding obtd. from this compsn. and having at least partly a thin
part of less than 1 mm thickness is also new.

- Epoxy cpds. of (C) are pref. bisphenol A based epoxy resins, glycidyl
ether esters derived from p-hydroxybenzoic acid and epoxy cpds. based
on PTMG or PEG. Polycarbodiimide is pref. formula (I). (D) has pref. a
wt. ratio of hard segments/soft segments of 70/30-15/85.

- USE/ADVANTAGE - The PBT resin compsn. is suitable for moulding wire
harness connectors, esp. those having thin hinges for cars, various
other connectors, sockets, relays, various housings, cord caps and
various car parts which are used engine rooms. It keeps not only
excellent mouldability, stiffness and heat resistance, intrinsic to
PBT but also has high tough(Dwg.0/0)
